Tulungagung, East Java, Indonesia

## INTRODUCTION

---

I'm an adaptable web developer with strong expertise in modern JavaScript ecosystems like Next Js, Express Js, and HonoJs. While my current expertise lies in full-stack TypeScript development, I'm passionate and able to quickly learn new languages, frameworks, or legacy systems to suit company goals and project requirements.

## WORK EXPERIENCE

---

### PT. Menara Indonesia

Frontend Web Developer

Intern

Agust – December 2023

- Developed three web applications using Next.js and TypeScript, including kampusgratis.com as the main project.
- Spearheaded the main project development to the final pre-release phase, successfully integrating complex backend services.
- Collaborated on task distribution and progress tracking.

### Freelance

Frontend Web Developer

Part Time

November 2024 - Recent

- Provided custom web solutions for 3+ clients, primarily using Next.js and Tailwind CSS.
- Streamlined task collaboration using Git.
- Worked on a project utilizing React and Material UI for building responsive and dynamic user interfaces.

### PT. BEE MATA INDONESIA

Fullstack

Part Time

November 2025 - December 2025

- Developing a custom Project Management System using Next.js and Hono.js, featuring seamless GitLab integration and dynamic multi-view layouts.
- Successfully established the core infrastructure and dynamic multi-view layouts within a strict 1-month timeline.
- Navigated a high-complexity legacy environment to inject modern features, successfully adapting new logic without disrupting existing workflows.

### Baggy Studio

Fullstack

Part Time

December 2025 - Recent

- Developed two custom web applications: Personal Branding and Digital Asset Marketplace.
- Successfully launched the Personal Branding website and completed the core commerce engine for the Marketplace, as well as being part of the team working on client projects from Baggy Studio.
- Optimized app performance and SEO, and integrated payments with Lemon Squeezy for this sales website.

## EDUCATION

---

### Universitas Bhinneka PGRI Tulungagung

2021 - 2025

Bachelor of Computer Science

GPA : 3.63

- Studied Laravel for backend development and API creation.
- Gained hands-on experience with Flutter for mobile app development.
- Learned core concepts of algorithms and data structures to optimize problem-solving.
- Developed proficiency in PHP programming language and explored applications in web development.
- Gained foundational knowledge in IoT (Internet of Things) technologies and their integration.

### SMAN 1 Karangrejo

2017 - 2020

MIPA

## TECHNICAL SKILLS

---

- Laravel API
- Neon Postgresql
- Prisma ORM
- Drizzle ORM
- Tauri
- Node.js
- Nginx
- Tailwind CSS
- Redis
- Typescript
- React
- S3
- Git
- Tanstack Query
- Next Auth
- Next Js Fullstack
- Hono Js
- OAuth

## FEATURE PORTOFOLIO

---

### Murotal Desktop

Finished

This desktop application was created as a result of my initial curiosity about the release of the Tauri framework, and I was attracted to it because Tauri can be extended with various frontend frameworks and compiles to Rust, making it faster than Electron.

### Arfixcode

Finished

This web application was developed to create a CMS platform for writing coding articles using Laravel Restfull API and React Js, and the first project to integrate the React Js frontend and the Laravel backend.

### Crud Studio

Finished

Crud Studio leverages Framer Motion for smooth animations, delivering a dynamic and engaging user experience for modern business profiles.

### Baggy Studio

Finished

Developing engaging and interactive corporate websites specifically designed for international audiences. Beyond a compelling user interface, I prioritize client objectives by implementing a comprehensive SEO strategy to ensure maximum visibility and organic growth in the global market.

### Portfolio V2

Finished

This website is a development of the previous portfolio website by taking splint as a reference, which tidies up the smallest details while considering UI/UX so that it looks clean and seamless.

### Web Monitoring

Finished

A full-stack web application built to reduce device manufacturing costs and provide a multi-geolocation and multi-device monitoring platform with Next.js and integrated with IoT for real-time water quality monitoring using websocket.

### Sales Car Blog

Finished

Built with Next.js Server-Side Rendering, this CMS platform serves as a sales tool and helps cover car sales. It was created using Tailwinds. This project is a learning experience exploring Next.js SSR and fulfilling a campus assignment.

### Portfolio

Finished

I created this website as a personal branding tool to introduce a project and share information about myself. The goal is to build relationships and strengthen my personal brand.

### Moon Ui

Finished

A dedicated digital marketplace for Baggy Studio's premium design assets. Integrated with Lemon Squeezy for seamless payments and automated licensing, the platform is built using NextJS SSR and built on a robust security architecture to ensure strict protection for digital products and user data.

## CERTIFICATES

---

### The Joy of React Certificate
